

Addendum to Expert Report of Dr. Todd MacKenzie

May 24, 2019

After receiving a correction to the dataset on May 23, 2019, related to Question 3, I updated the analysis and conclude the following:

“Of the 122 individuals for whom there was responses to the question, 103 were at serious risk for institutionalization in a state hospital. The estimate of the frequency is 85.1% (95% confidence interval of 78.7% to 91.6%).”
